**„There are fewer and fewer people today who are distinguished by strength of character, honesty, comprehensive knowledge, and selfless dedication to a life's work.“**

**Ulrich Kutschera,**

Nachruf auf den COVID-Forscher Prof. Dr. med. Arne Burkhardt

Source: Mikroskopie, Jahrgang 10, Nr. 2/2023, S. 112-114

**„A collection of evidence for the lethality of the so-called "vaccines" against COVID-19: Pathologist Dr. Ute Krüger presents it in a photo book. "Vaccinated - dead" is a medical atlas that is understandable even for laypeople. It describes 57 cases of patients whom pathologist Professor Arne Burkhardt and colleagues examined after receiving an mRNA "vaccination." The results are devastating and document a medical crime of the century.“**

**Paul Brandenburg** about "Vaccinated - dead"

## Evidence of the damage caused by vaccination.

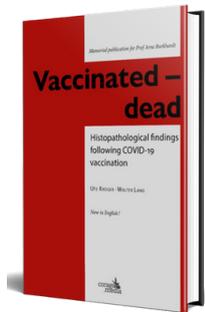

This histopathological atlas of vaccine damage after mRNA vaccination against SARS-CoV-2 is unique in the world to date. It's existence is thanks to the highly experienced and technically proficient german pathologists Prof. Arne Burkhardt and Prof. Walter Lang, who worked at the Institute of Pathology in Reutlingen. The tissue samples were sent there by pathological or forensic institutes from all over Europe, primarily to investigate deaths that could be linked to this vaccination. Tissue samples from living people were also sent in if it was suspected that this vaccination could be the cause of the tissue damage.

The atlas is aimed primarily at pathologists, but also at physicians from other specialities and non-medical professionals interested in the topic.

On the one hand, the impressive histological images are presented in order to sensitise colleagues working in routine pathology and forensic medicine to these completely new findings and to draw attention to the changes typical of mRNA injections. On the other hand, corresponding case descriptions are included which document the tragic circumstances and the manifold suffering of people after these injections.

Dr Ute Krüger is a German-trained, Swedish-based pathology specialist with 25 years of professional experience. She has worked as a consultant physician at the Swedish hospitals in Växjö and Kalmar for the past 18 years, primarily as a breast cancer specialist. For four years she also served as medical director of the pathology department in Växjö. During the last eight years of her career as a pathologist, she was involved in breast cancer research at the University of Lund alongside her clinical work at Kalmar Hospital. This resulted in several publications.

This histopathological atlas of vaccine damage after mRNA vaccination against SARS-CoV-2 is unique in the world to date.

Memorial publication for Prof Arne Burkhardt
